Jamie, here are my edits to these three BaP documents. Hopefully they have increased the clarity. I have one sentence from the tox review I am checking with Karen on.

Ex. 5 Deliberative Process (DP)

Ex. 5 Deliberative Process (DP)

Something in the doc crashes my computer when I try to update the HERO links, so I think this needs to be fixed by Vicki/Connie. Maybe we can do it after Sam's review as long as she is able to look at it without crashing her computer (I think it may have to do with the LitCiter add in).

-K

Here are some tweaks to the ToxReview and responses to public comments, and responses to some comment bubbles. I didn't change anything in the Supplemental Materials (so it's not attached), because the only comment I saw was how to refer to the 1990 Clement Associates document. I strongly think that since a formal EPA version exists, and Clement was EPA's contractor, the correct cite should be USEPA (1990).

ToxReview:

Ex. 5 Deliberative Process (DP)

Enjoy,
Karen

Importance: High

Kathleen,
Martin and I have both gone through the TR (I went through the Supplemental Info also). I have tried to delete old comments. I've added a few new ones or responded to old outstanding ones. It's really close. Minimal text changes were also incorporated. Please take a look at both of these documents along with the summary and response I sent the other day (the 27th I think). We need to turn this around next week and get it to Samantha and Vince by Friday June 6 for review. Let me know if you have any questions or want to talk. Karen, there may be a few comments in the TR related to text you revised. After we finalize the text, we need to clean up the document (spell check, TOC update, HERO links, maybe send to Vicki to fix the issues with it freezing or crashing—I had trouble)
Thanks!!
Jamie

Jamie,
Please see the attached redline revised BaP Tox Review, Supplemental Info, and Response to Comments. I have incorporated changes from the team members and tried to address your comments or note why I have not. I did not get around to making changes in the preamble (they look very minor), but I did do a compare with the latest preamble on the intranet which I will attach. (Vince added lots of subsections to the HERO references which need to be added correctly to avoid breaking the links and this can be time consuming.)

The Tox Review has some sort of issue involving freezing up or crashing when I try to format the HERO links, but we can get that fixed by Vicki et al after we are done making Samantha revisions.

I mentioned earlier that I've tried to get Paul White to work on the toxicokinetic differences between mouse skin and human skin, but I have not received a work product from him. I will let him know to send any products in the next week to you and Marty.

Happy reviewing.

Kathleen
